## **Downstream Application Case: Steroid Compounds Catalysis**

## Selectivity enhanced by 70%: from 35.4 to 73.89

No.	Protein Selectivity
WT	35.4
1	65.61
2	73.89
3	55.37
4	60.43
5	50.75
6	48.93

Improving selectivity by modifying the P450 enzyme that catalyzes steroid compounds.
